10:30-11:30 am

Online Experiments in Public Administration Research

Abstract

Public Administration has recently seen a rise in the use of experimentation in empirical research. This trend is commonly associated with calls for a greater emphasis and integration of psychology and behavioral sciences into Public Administration. Dr. Stritch will discuss trends in experimental research in Public Administration, including the use of MTurk and online panels (Yougov, Qualtrics). To illustrate key issues and considerations, Dr. Stritch will provide examples from a recent experimental study considering the effects of gender bias on citizen evaluations of public sector leaders. Finally, the presentation will conclude with a discussion of the future of experimentation in the study of Public Administration, and consider whether experiments are simply another tool in the methodological toolkit of researchers or part of a broader movement that will shape the future of the field for years to come.

Justin Stritch is an Assistant Professor at the Arizona State University's School of Public Affairs and Senior Research Affiliate in the Center of Organization Research & Design
